Any Mobile Device –
Secured!**

ON D'GO

D'PROS **ON D' GO** is a new enterprise mobile solution that extends and adapts business processes and operational reach for all aspects of the modern mobile world. Mobility, personalization, and efficiency are the name of the game, as everyone uses popular mobile devices on the go. Today, you simply must be prepared to conduct business immediately, regardless of your location, timezone, or device type.

ON D' GO Approval empowers managers and mobile users by enabling you to perform exactly the same SAP-related approve/reject tasks no matter where you are, just as though you were at the office.

ON D' GO is the innovative mobile solution that lets you rapidly approve/reject SAP operational and business tasks directly from your mobile device:

- Regardless of wireless connectivity
- Regardless of real-time/offline access
- Regardless of geographical location
- Based on internet and email connectivity only
- Compatible with any popular mobile device: smartphone, tablet, or laptop
- Secure access and user authentication.

On-the-Go Approval is ready for the mobile business challenges of today and tomorrow, increasing efficiency, boosting productivity and reducing business operations costs.

ON D' GO @Work with YOU

"Where are you?" the purchase manager demands the instant I pick up my phone. "You're the only one who can approve this urgent PO!" I sneak a look at my watch. I'm out of the office, at my last meeting before the weekend. But I only have my smartphone with me, and by the time I get back it'll be far too late to do anything. "If only I could view and approve the PO instantly on my smartphone," I find myself thinking.

ON D' GO enables you to perform on-the-go with the same speed and effectiveness as though you were sitting right at your office desk. It eliminates the need to:

- Connect to the SAP system in real time
- Connect via a workstation
- Install SAP Logon
- Use secure network access (VPN/firewall)

The very same business vital information you would have access to in your office environment is displayed on your mobile device, including all relevant decision-supporting documentation as attachments. And, of course, user authentication security is enforced, so that no one else can mistakenly approve/reject the task.

Approve/Reject can be performed from any Apple iPhone/iPad, RIM BlackBerry, Google Android, or Microsoft Windows popular mobile device. There's no need to install any app. All you need are the internet and email capabilities.

SAP® Certified
Powered by SAP NetWeaver®

USAGE SAMPLES:

- Approve/reject purchase orders
- Approve/reject sale order discounts from sales reps in real-time
- Approve new employees
- Approve/reject travel requests
